**Layover.**

## Our Logo

In crafting the Layover logo, we strategically placed the letter 'e' as the central element. This 'e' not only serves as the focal point but also cleverly incorporates a plane icon, succinctly representing Layover's core function.

It's the primary icon within the design, symbolizing our commitment to facilitating travel. Surrounding this iconic 'e' is a wordmark, characterized by a font with soft edges, carefully chosen to exude a sense of friendliness, fun, and aesthetic appeal. This thoughtful combination of elements ensures that our logo not only captures attention but also conveys the welcoming and enjoyable experience we strive to provide at Layover.

Layover.

## Our Logo

The primary logo color, should always be in Blue, yellow, black and navy blue.

Contrast is important—use a light logo on colored backgrounds and a colored logo on lighter backgrounds.

## Our Logo

The preferred color for our logo is in one of our vibrant colors. In some cases, a full color logo may not be practical or possible due to limitations in printing. For these instances we may use a white-black version (made as a 100%black) a one-color black or white logo

## Clearspace

### Minimum Size

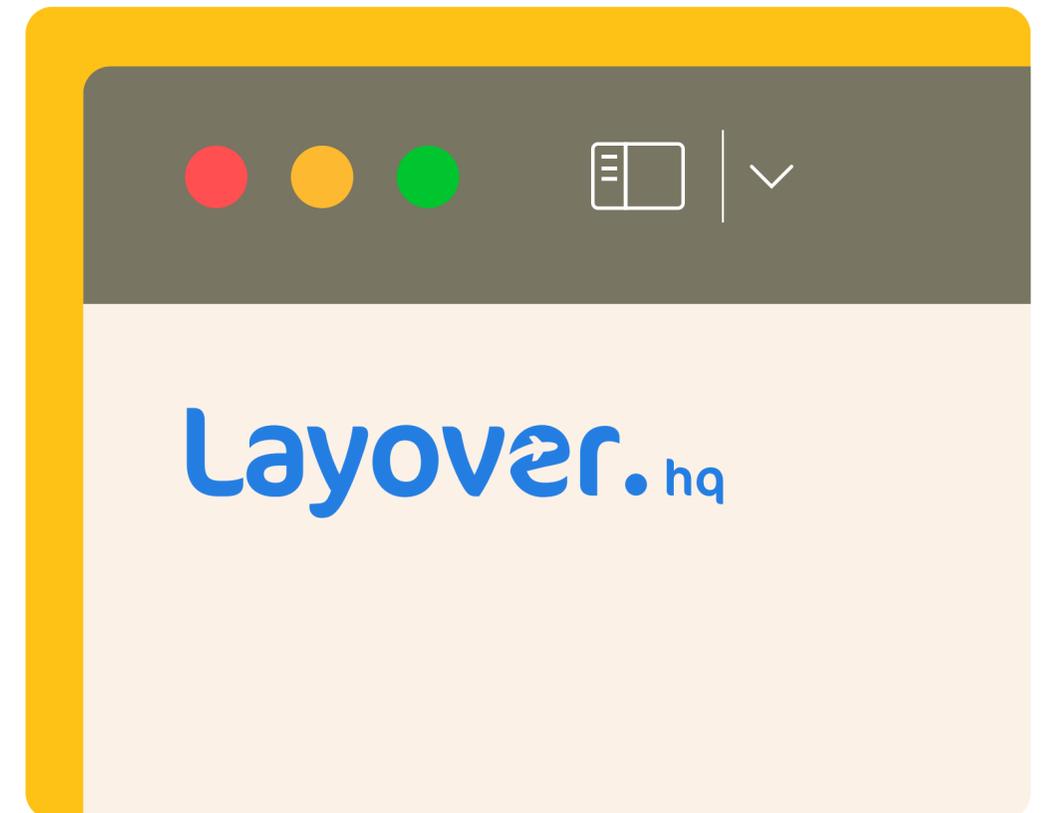

For clarity across digital and print applications our logo should never be reproduced at any size below the adjacent guidance.

### Clear Space

To look its best, our logo needs space to stand out. We have defined parameters to make sure no other elements encroach on this clear space.

## Icon

We use our brand icon as our primary symbol on social and across other digital touch-points.

Our icon is designed to work successfully in whatever shape it is required to fit within, whether it be circle or square.

## Colors

Typography is always aligned left.

This provides the eye with a constant starting point for each line, making text easier to read.

When typesetting headlines, the leading should be 15% larger than the type size. To calculate, multiply the type size by .15 and add the result to the typesize.

When setting body copy, the leading should be 25% larger than the type size. To calculate this, multiply the type size by .25 and add result to the typesize. All type should be set to -20 tracking. Body column width should ideally be between 7-9 words long
